

JEFFY COMMERCE (PTY) LTD

Direct from the factory. Delivered by your neighbour.

Jeffy imports consumer goods directly from China under its own SARS customs code and sells them through a network of independent local resellers who deliver from home. It removes the two costs that make South African e-commerce unprofitable — the import middlemen and paid last-mile delivery — and turns the saving into factory-direct prices for customers and real income for resellers. **We are raising R5.0 million for 50% of the company.**

How Jeffy works

1**Import direct**

Goods from China under Jeffy's own SARS customs code — true factory pricing, no import middlemen.

2**Wholesale to locals**

Independent resellers buy stock at wholesale and resell at retail in their own area.

3**They deliver**

Same-day, on foot or by car, from home. PayFast auto-splits every sale in real time.

4**Wish List guides it**

Customers tell Jeffy what to stock *before* a cent is spent — demand and marketing in one.

The three-year picture

YEAR	ORDERS / MO (END)	REVENUE*	OPERATING PROFIT	WHAT HAPPENS
Year 1	2,200	R1.9m	-R0.4m	Build the network; reach break-even
Year 2	8,000	R11.0m	+R2.1m	Profitable; scale proven areas
Year 3	18,000	R26.6m	+R7.0m	National rollout; capital fully earned back

*Revenue is Jeffy's wholesale leg (what resellers pay Jeffy), not retail turnover. Figures are illustrative projections on the assumptions stated inside — not guarantees of return.

The deal in one line. R5.0m is invested for a 50% shareholding, released in three milestone-gated tranches and used mainly to buy inventory — a recoverable asset. The capital stays in the business and compounds; the investor's return comes as dividends and the growing value of the equity. The business reaches monthly break-even in Year 1 and is solidly profitable by Year 2.

1 The Opportunity

Imported goods are overpriced, online delivery is expensive, and millions need work. Jeffy solves all three at once.

South Africans pay too much for imported goods because of the layers between the factory and the buyer, and online retail stays expensive because last-mile logistics is hard and costly. Meanwhile unemployment sits at roughly **32%** — and above **60%** for young people — leaving a vast pool of capable people who could earn by selling and delivering in their own communities. Jeffy imports directly and hands delivery to local resellers: the customer gets factory-direct prices, and the reseller gets a real micro-business at a fraction of the capital a shop or courier needs.

Market context: South African online retail is growing roughly 8–9% a year and is projected to reach around R225 billion within five years — a large, expanding market into which a structurally lower-cost model can take share.

2 The Insight — Why the Obvious Model Loses Money

Plain "import and courier to the customer" loses money in South Africa. Jeffy is engineered to fix exactly that.

Most import-to-consumer plays struggle here because two costs quietly eat the margin: **paid customer acquisition** (advertising to win each order) and **last-mile courier delivery**. On a typical R249 order, those two alone can turn a healthy gross margin into a per-order *loss*. This is why even large players lean on heavy subsidy.

THE NAIVE MODEL — IMPORT & COURIER DIRECT

Customer pays	R249
Landed cost (not VAT-registered)	–R92
Courier last-mile	–R60
Paid acquisition (ads)	–R90
Fees, packaging, returns	–R25
Profit per order	–R18

Source: Jeffy's own internal unit-economics model. The direct model is structurally loss-making.

THE JEFFY MODEL — RESELLER NETWORK

Reseller buys from Jeffy (Jeffy revenue)	R160
Landed cost (VAT-registered)	–R80
Fees, packaging, returns	–R20
Last-mile delivery	reseller
Paid acquisition	low*
Jeffy contribution / order	~R60

*Resellers generate local demand and the Wish List generates earned media, so paid acquisition is a small central cost, not a per-order courier-style drain.

The whole business model is this swap. Jeffy removes its two worst costs by design: the reseller carries last-mile delivery (funded by their own margin), and the reseller network plus the Wish List replace most paid advertising. The same R249 order goes from a **–R18 loss** to a **+R60 contribution** for Jeffy — while the reseller still earns ~R59. That single structural move is the investment thesis.

3 How the Model Works

Jeffy imports and owns the stock; independent resellers buy it wholesale and resell at retail. Both sides earn a healthy margin.

Value chain: Chinese factories → Jeffy (imports, owns landed stock) → independent resellers (buy wholesale, resell at retail) → customers (order on jeffy.co.za). Jeffy collects payment centrally; **PayFast Split Payments** divides each sale in real time into Jeffy's wholesale revenue and the reseller's margin, so Jeffy never holds a reseller's money.

PRINCIPLE	WHAT IT MEANS
Two-tier margin	Jeffy earns a mark-up over true landed cost; the reseller earns a mark-up over wholesale. Both are set off real landed cost, so neither side runs at a loss.
Graduation path	New resellers start on credit (Jeffy-owned stock, retention of title) against a limit; as they build a cash cushion they buy upfront for a bigger margin — steadily reducing Jeffy's credit exposure.
Asset-light for Jeffy	No stores, no fleet, no last-mile payroll — those costs and risks sit with resellers, who are paid by their margin.
Buy-sell, not employment	Resellers buy and resell at a margin — not employees, not agents (the proven Avon / Tupperware structure). No PAYE, minimum wage or leave on the reseller leg.

WHY THIS WILL LOOK FAMILIAR — AND CREDIBLE — TO A CHINESE REVIEWER

Jeffy is the South African expression of three models already proven at massive scale in China:

社区团购 **Community group-buying** local leaders aggregate neighbourhood demand and handle the last leg — exactly Jeffy's reseller.

代理 / 分销 **Distributor model** independent agents buy wholesale and resell — Jeffy's two-tier margin.

私域流量 **Private-domain traffic** demand built through trusted local relationships, not paid ads — Jeffy's Wish List and reseller word-of-mouth.

Pinduoduo, Meituan and the community group-buying wave built tens of billions in value on these mechanics. Jeffy applies them to a market — South Africa — where high unemployment makes the reseller layer abundant and where factory-direct pricing has an unusually large gap to exploit.

4 Why It's Hard to Beat

A dense local network is slow for a pure-online rival to copy — and the structure keeps Jeffy lean and legally clean.

Once resellers are dense in an area, a pure-online competitor cannot easily match them on delivery cost or local trust. Selling factory-direct also undercuts the importers and retailers stacked above the factory price, while **VAT registration** lets Jeffy recover the 15% import VAT that an unregistered importer eats as a permanent cost. The result is a price the incumbents structurally cannot reach without rebuilding their whole chain.

Honest note on the moat & structure. The legal scaffolding — buy-sell (not employment), disclosed-agent collection, no joining fee (keeps it outside Consumer Protection Act franchise rules), and VAT registration — is sound in principle and modelled on established businesses, but must be finalised with the company's attorney and chartered accountant before resellers are signed. These are confirmable items, not open questions, and the cost of doing so is in the Tranche-1 budget.

5 The Money Per Sale

On a typical R249 order, Jeffy keeps about R60 and the reseller about R59 — roughly 24% each.

Illustrative, on a representative R249 order, assuming VAT registration (import VAT recovered, bringing landed cost from ~R92 to ~R80). The reseller carries delivery, funded by their own margin.

JEFFY'S SIDE		RESELLER'S SIDE	
Customer pays (retail)	249	Sells to customer	249
Reseller buys from Jeffy (Jeffy revenue)	160	Pays Jeffy (wholesale)	160
Jeffy landed cost (VAT-recovered)	80	Gross margin	89
Variable cost (fees, packaging, returns)	20	Less local delivery (approx.)	30
Jeffy keeps / order	~60	Reseller keeps / order	~59

TWO CONDITIONS WE ARE EXPLICIT ABOUT

- **VAT registration is a committed action, not an assumption.** Jeffy is not yet VAT-registered; unregistered, the 15% import VAT (~R12/unit) is a permanent cost and landed cost is ~R92. Registering recovers it (landed ~R80). Jeffy will register for VAT before scaling inventory — it is in the Tranche-1 task list and the figures above assume it is done.
- **Customer acquisition is low, not zero.** The plan does *not* assume free marketing. It assumes resellers and the Wish List do most of the demand work, so paid marketing sits as a modest central overhead (built into the R60k→R280k/month overhead line) rather than a R90/order courier-style ad cost. The sensitivity table on page 7 stress-tests this directly.

IS ~R59 ENOUGH TO KEEP A RESELLER?

At maturity the model assumes ~120–150 active resellers serving 18,000 orders/month — about 90–150 orders each per month, or roughly R5,300–R8,800 in monthly margin for part-time, local, low-capital work with no fixed costs. That is attractive supplementary income in a high-unemployment market, and the graduation path (buy upfront for a bigger margin) rewards the best performers. Reseller recruitment, productivity and churn are modelled explicitly and listed as a key risk on page 9.

6 The Wish List — Demand & Marketing in One

Customers tell Jeffy what to stock before a cent is spent — and the weekly giveaway markets the brand for almost nothing.

Before buying any stock, Jeffy asks customers what they want. Anyone can submit one to ten products they wish they had — no purchase, no catch. Each week Jeffy draws winners at random and grants the wish (sourced and delivered free), announcing every winner on radio, in local press, and across social media.

IT DE-RISKS INVENTORY

The wishes are a live map of real demand. Jeffy stocks what people have already asked for, so it buys into proven want — minimising dead stock, the single biggest way an import business loses cash.

IT MARKETS FOR ALMOST NOTHING

Each "wish granted" is a public, human, shareable moment — turning marketing into a weekly community event at a fraction of paid-ad cost, and feeding the private-domain, word-of-mouth demand the model relies on.

This is also why the first hire is a Social / Community Manager. The Wish List, the weekly winners, the socials and reseller communications are a real job — and the role that most directly drives revenue. It is funded from day one out of central overhead (see page 8).

BRAND-SAFETY NOTE

The programme is branded "**Jeffy Wish List**" and is a no-purchase weekly random draw (not a vote). It deliberately never uses the phrase "Make-A-Wish," which is a protected trademark. Promotional-competition rules under the Consumer Protection Act will be followed (published rules, no purchase required).

7 The Investment

R5.0m for 50% of the company, released in three tranches as each stage proves out. Roughly two-thirds is inventory — a recoverable asset, not a sunk cost.

TRANCHE	WHEN	AMOUNT	RELEASED AGAINST
1 — Prove	Months 1–3	R0.75m	Setup, VAT registration, legal/accounting, Wish List demand campaign, first social/community hire, first test inventory.
2 — Launch	Months 4–12	R1.50m	At-scale inventory for 1–2 proven areas, reseller credit float, area coordinators, marketing.
3 — Scale	Year 2–3	R2.75m	Container-scale inventory in proven winners; national reseller rollout; fulfilment team.
Total		R5.00m	Later tranches gated on hitting the prior stage's targets.

WHERE THE MONEY GOES

Inventory & working capital	R3.20m	64%
Reseller onboarding & credit float	R0.70m	14%
Marketing & Wish List giveaways	R0.65m	13%
Setup, legal, accounting, platform, team & insurance	R0.45m	9%

~64% of the raise is inventory and working capital — it converts back to cash as it sells, so the true cash-at-risk is well below the headline R5.0m. Ongoing insurance premiums (stock, goods-in-transit, product liability) sit in monthly overhead.

THE DEAL STRUCTURE

- **Equity, not a loan.** R5.0m buys a **50% shareholding** in Jeffy Commerce (Pty) Ltd, registered at CIPC, with funds introduced from abroad through proper exchange-control (SARB) channels.
- **Return = dividends + equity value.** The capital stays in the business and compounds; the investor's return comes from their 50% share of profits and the rising value of the stake — not from withdrawing the capital.
- **Shares vest with the tranches.** Equity is issued in proportion to capital actually introduced, so ownership tracks funding.
- **Clean governance.** A shareholders' agreement defines the founder's day-to-day authority, reserved matters, a deadlock mechanism, and tag/drag rights — protecting both sides in a 50/50 holding.

Why this structure protects the investor's downside. Capital is staged against proof, two-thirds is recoverable inventory rather than sunk spend, and the equity is genuine and retained — aligning the founder and investor on the same outcome: a profitable, growing company.

8 The Return — A 3-Year View

Break-even in Year 1, ~R2.1m profit in Year 2, ~R7.0m in Year 3 — and the investor's 50% share of profit recovers the R5.0m within roughly three years while the stake keeps compounding.

YEAR	REVENUE	OPERATING PROFIT	CUMULATIVE	STAGE
Year 1	R1.9m	−R0.4m	−R0.4m	Building — reaches break-even in Q4
Year 2	R11.0m	+R2.1m	+R1.7m	Profitable and self-funding
Year 3	R26.6m	+R7.0m	+R8.7m	National rollout; investor's stake matured

Returns reach the investor as dividends (from Year 2 onward, as cash allows alongside growth) and as the growing value of the 50% equity. On these projections the investor's half of cumulative profit approaches the R5.0m invested by around the end of Year 3 — after which they continue to own half of a profitable, growing business.

SENSITIVITY — YEAR-3 RUN-RATE OPERATING PROFIT IF CONTRIBUTION PER ORDER IS LOWER THAN BASE

CONTRIBUTION / ORDER	VS BASE (R60)	MONTHLY OP. PROFIT*	ANNUALISED RUN-RATE	READ
R40 (stress)	−33%	~R0.44m	~R5.3m	Still clearly profitable
R50 (cautious)	−17%	~R0.62m	~R7.4m	Comfortable
R60 (base)	—	~R0.80m	~R9.6m	Plan case
R70 (upside)	+17%	~R0.98m	~R11.8m	If returns/fees beat plan

*At Year-3 maturity (18,000 orders/month) with central overhead of ~R280k/month. The model stays profitable even if contribution per order falls a third below plan — the downside is slower returns, not losses.

QUARTERLY DETAIL (THE FINE PRINT BEHIND THE YEARS ABOVE)

QTR	ORDERS/MO	REVENUE	OP. PROFIT	CUMULATIVE	QTR	ORDERS/MO	REVENUE	OP. PROFIT	CUMULATIVE
Y1 Q1	150	R0.07m	−0.15	−0.15	Y2 Q5	3,500	R1.68m	+0.21	−0.14
Y1 Q2	500	R0.24m	−0.15	−0.30	Y2 Q6	5,000	R2.40m	+0.42	+0.28
Y1 Q3	1,200	R0.58m	−0.08	−0.39	Y2 Q7	6,500	R3.12m	+0.63	+0.91
Y1 Q4	2,200	R1.06m	+0.04	−0.35	Y2 Q8	8,000	R3.84m	+0.84	+1.75
Y3 Q9	10,000	R4.80m	+1.14	+2.89	Y3 Q11	15,000	R7.20m	+1.92	+6.34
Y3 Q10	12,500	R6.00m	+1.53	+4.42	Y3 Q12	18,000	R8.64m	+2.40	+8.74

Op. profit / cumulative in R millions. Assumptions: ~R60 contribution per order; central overhead rising from ~R60k to ~R280k/month as the team and platform scale. Revenue is Jeffy's wholesale leg.

9 Economic Impact, Team & Visa Fit

A lean, South-African-first payroll plus a reseller network that creates hundreds of independent local livelihoods.

Jeffy is built to grow its team as the business can afford it — payroll follows revenue, never ahead of it. The direct team starts small and South African, while the reseller network delivers the large-scale economic benefit.

PHASED HIRING PLAN (ALL SA CITIZENS / PR)

PHASE	ROLES
Employee #1 From launch	Full-time Social / Community Manager — a South African citizen running the Wish List, weekly winners, socials and reseller comms (the demand engine). One full-time SA hire means 100% South-African employment from day one — the 60% rule is met immediately.
As revenue covers it Year 1–2	Reseller / area coordinator(s) for the ground game, then fulfilment / warehouse and customer support — each added only when revenue covers it, all South African.
Scale Year 2–3	Regional managers, sourcing/import admin, finance.

WHY THIS FITS THE SA BUSINESS VISA

- **60% rule satisfied from day one.** The 60% South-African-employee requirement is a *ratio*. Employee #1 is a full-time South African Social Manager — that is 100% SA employment on day one, ticking the box without over-staffing. The ratio holds as the all-SA team grows.
- **Strong DTIC benefit case.** Beyond payroll, the reseller network creates **hundreds of independent SA micro-livelihoods** — exactly the economic-development impact the DTIC weighs when issuing its mandatory Letter of Recommendation.
- **Genuine, retained investment.** The R5.0m is real equity that stays in the business (not repaid out), introduced from abroad via SARB channels and confirmable by a SA chartered accountant — the basis a business visa requires.

FOR THE INVESTOR'S VISA PATHWAY (SUMMARY — CONFIRM WITH AN IMMIGRATION ATTORNEY)

The SA Business Visa (Immigration Act 13 of 2002, s.15) generally requires a capital contribution of ~R5.0m from abroad confirmed by a SA chartered accountant; at least 60% South African employees within 12 months; and a Letter of Recommendation from the DTIC confirming the business is viable and beneficial to the economy. A capital-amount waiver is possible for favoured sectors. This plan is structured to support all three: genuine retained R5.0m equity, an all-SA direct team, and a documented economic-benefit case. **Timing — not instant.** A SA chartered accountant can certify the R5.0m as *available* (held abroad or already invested), so the application need not wait for full deployment; allow roughly **4–8 months end to end** — a DTIC recommendation in ~45 working days, then Home Affairs in ~8–12 weeks. The investment must be genuinely made and the 60% SA-employee condition met within 12 months of issue. Visa qualification, tax and structuring must be confirmed by the company's immigration attorney and chartered accountant.

10 The Scaling Ladder

Build the foundations once, properly — then replicate fast. This is an empire, not a get-rich-quick scheme.

Each rung is only climbed once the rung below is proven. That discipline is what makes the staged capital safe: Jeffy spends small to prove the model works in one place, then pours capital only into what has already been shown to sell profitably. The mechanics are deliberately **repeatable** — once one area works, a second and third are copies of a known recipe, which is why a careful build in the early years can scale quickly later.

RUNG	STAGE	WHAT GETS BUILT	MOVE UP ONLY WHEN...
1	Foundation Months 1–3 · R0.75m	Company, customs code and platform live; VAT registered; legal/accounting engaged; Employee #1 — full-time SA Social Manager hired; Wish List launched and gathering demand data; first small test inventory ordered.	The Wish List shows clear, repeated demand for specific products and the platform processes a real order end-to-end with a split payment.
2	Prove (one area) Months 4–8 · part of R1.5m	Recruit the first reseller cohort in a single, dense area; geo-routing live; deliver real orders; measure true contribution per order, returns, and reseller productivity.	Contribution per order, return rate and reseller retention hold at or near plan in that one area for a sustained period.
3	Densify Months 8–12 · rest of R1.5m	Add resellers and order volume within the same area until it is saturated; refine the onboarding playbook; reach monthly break-even.	The first area is profitable on its own and the onboarding playbook is documented and repeatable by a coordinator, not just the founder.
4	Replicate Year 2 · part of R2.75m	Copy the proven recipe into 2–4 new areas; hire SA area coordinators to run them; container-scale inventory on proven winners; add fulfilment.	New areas reach profitability on the same timeline as the first — proving the recipe travels, not just the founder.
5	National rollout Year 3 · rest of R2.75m	Roll out town by town across the country; regional managers; deeper sourcing; broaden the catalogue from Wish List demand.	Self-funding from profit; the network and brand compound.
6+	The empire Year 4+ · self-funded	A national reseller network and a trusted brand — the platform to add categories, private-label proven winners, and expand the catalogue, all funded by the business itself.	—

Why this is both safe and fast. Safe, because no large capital is committed until the model is proven in a live area and the playbook is repeatable. Fast, because once the recipe is proven, each new area is a copy — and copies scale far quicker than originals. Solid foundations first; rapid, smart replication after.

GUIDING PRINCIPLE

Spend small to learn, spend big only on what's proven. Every tranche of capital is released against a rung being climbed — never on hope. That is what turns a good idea into a durable business.

11 Stock, Storage, Insurance & Liability

Jeffy owns the stock, so Jeffy insures it — and the model is designed to keep that risk small, capped and covered.

Because resellers hold Jeffy-owned stock at home and deliver from there, three things are handled deliberately rather than left to chance: where stock is stored, how it is insured, and who carries a loss.

1 · STORAGE & ZONING

- The bulk of inventory sits in a **central / regional micro-warehouse**; resellers hold only small, fast-moving rolling stock — keeping each home within municipal "home-occupation" limits and cutting concentration risk.
- Per-reseller stock is **capped by the credit limit**, so no single residential address holds large value.
- Resellers confirm they may store & deliver from their property (owner / landlord / body-corporate rules). Food lines are avoided unless a municipal licence is held.

2 · INSURANCE (CARRIED BY JEFFY)

- Jeffy holds title, so Jeffy carries a central commercial "**stock at various premises**" policy plus **goods-in-transit** cover — not the reseller's home policy, which excludes business stock.
- The per-reseller value cap keeps the cover insurable and bounds any single claim.
- **Product-liability cover** for Jeffy's importer exposure under the Consumer Protection Act (s.61 strict liability).
- Premiums sit in monthly overhead — affordable even in the stress case (page 7).

3 · WHO CARRIES A LOSS — AND THE HONEST LIMIT OF INSURANCE

Stock moves under **retention of title** with a per-reseller ledger and inventory records; theft claims require a SAPS case number. Insurance covers fire, burglary and transit loss. The hardest exposure — a reseller selling stock and claiming theft, or disappearing with it — is only *partly* insurable, because dishonesty by the person entrusted is excluded from ordinary cover. It is therefore managed operationally: vetting, small starting limits, graduation to larger limits, and a modest **bad-debt allowance** built into the model rather than assumed away.

To be finalised before launch (Tranche-1 budget): exact policy wordings with a commercial broker (stock-throughput + goods-in-transit + product liability), the reseller agreement with an attorney (title, security, loss allocation), and a zoning check with a town planner. These are confirmable, already-budgeted items — not legal or broking advice.

12 Risks & Mitigations

We name the real risks and show how the structure contains each one.

RISK	MITIGATION
Unit economics weaker than modelled (returns, FX, freight eat the R60 contribution)	Staged capital — Tranches 2 & 3 gated on proven contribution; focus on items that comfortably carry freight & duty; the sensitivity table shows the business stays profitable even at R40/order.
Customer acquisition harder than hoped (Wish List / resellers under-deliver demand)	Marketing is a flexible central overhead, not a fixed per-order cost; the prove-cheaply-first roadmap tests demand in 1–2 areas before big capital is released.
Reseller recruitment / retention	Go dense in 1–2 areas before going wide; ~R59/order plus a graduation path to bigger margins keeps recruitment strong; dedicated SA area coordinators own onboarding and support.
Reseller credit / stock loss (stock not paid for, or lost/ stolen at a home)	Retention of title; conservative starting limits; per-reseller ledger and monthly close; graduation to upfront purchase. Stock at homes & in transit is centrally insured (see p.10), with single losses bounded by the per-reseller cap. See page 10 for storage, insurance & the dishonesty limit.
Cash locked in transit & inventory	Small proving batches first; ~64% of the raise is recoverable inventory; demand pre-validated by the Wish List to minimise dead stock; monthly close reconciles inventory at landed cost.
FX & freight volatility	Cost at the FX rate actually paid; pricing allowance built into landed cost; reconcile monthly.
Reseller mis-classification (deemed employees/agents)	Attorney-drafted buy-sell agreement, retention of title, no joining fee, disclosed-agent collection — finalised before resellers are signed (Tranche-1 budget).
VAT / tax treatment	Register for VAT before scaling inventory; chartered accountant confirms VAT recovery, provisional tax and structuring; monthly reconciliation of Nedbank, PayFast and COGS at landed cost.
Competition (Temu/Shein direct-to-consumer)	Jeffy competes on same-day local delivery, local trust and credit/cash-on-delivery convenience that cross-border parcels can't match — plus factory-direct pricing the local incumbents can't reach.
Product liability (CPA s.61 importer exposure)	Product-liability insurance; sourcing from checked suppliers; clear instructions/warnings; importer records kept five years (see page 10).
Key-person / execution	Early SA hires (social/community + area coordinators) reduce single-founder dependence; documented processes and monthly close build operational resilience.

13 Company, Team & Compliance

A registered, import-ready South African company with verifiable identifiers.

REGISTERED NAME	Jeffy Commerce (Pty) Ltd
REGISTRATION NO.	2025/950712/07
INCORPORATED	10 Dec 2025 · FY end February
INCOME TAX NO.	9168272293
SARS CUSTOMS CODE	CU25827795 (importer approved 18 May 2026)
DIRECTOR / PUBLIC OFFICER	Tredoux Willemse
BANKER	Nedbank · acct 1307614477 · br 198765
WEB	jeffy.co.za · hello@jeffy.co.za

TEAM

Founder & Director — Tredoux Willemse. South African; has worked across multiple continents; drives strategy and sourcing. **Early hires (all SA):** Social / Community Manager and Reseller / Area Coordinators from launch, scaling with revenue. **To be engaged:** a South African attorney (reseller & competition documents) and a chartered accountant (VAT, tax, structuring). Resellers form the distributed network as independent businesses.

COMPLIANCE

Provisional tax (IRP6) + annual ITR14; CIPC annual return with Beneficial Ownership; VAT registration before scaling; import records kept five years; monthly close reconciling Nedbank, PayFast settlements and inventory/COGS at landed cost. Foreign investment introduced via SARB exchange-control channels and confirmed by a SA chartered accountant.

FOR THE INVESTOR'S INDEPENDENT ADVISOR — THE ONE-PAGE READ

- **The thesis is structural, not promotional:** the reseller model removes the two costs (paid CAC + courier last-mile) that make SA import e-commerce lose money, flipping a –R18/order direct model to a +R60/order Jeffy contribution.
- **The numbers are conservative-tested:** the business stays profitable even at a third lower contribution per order; capital is staged against proof; two-thirds is recoverable inventory.
- **The deal is clean:** genuine 50% equity, capital retained and compounding, shares vesting with tranches, proper 50/50 governance.
- **The structure is confirmable:** VAT, reseller classification and visa qualification are explicit, budgeted, and to be signed off by the company's attorney, chartered accountant and immigration attorney.

Disclaimer: for information and discussion only. Registration, tax and customs identifiers are verifiable with CIPC and SARS. Financial figures are illustrative projections based on the stated assumptions and are not audited results or guarantees of return. Tax, VAT, legal-structure and investment/visa positions require confirmation by the company's chartered accountant, attorney and immigration attorney before they are relied upon.
